

**AMENDMENTS TO THE CLAIMS:**

1. (currently amended) A grip, comprising:  
a transparent polymeric cylindrical body having an inner surface and an outer surface, the inner surface defining a cavity shaped and dimensioned for receiving an article; and  
a design formed within the body and between the inner surface and the outer surface of the body, wherein the design is a result of altering the appearance and material characteristics of the cylindrical body between the inner surface and the outer surface.
2. (original) The grip according to claim 1, wherein the design is three-dimensional.
3. (original) The grip according to claim 1, wherein the grip is shaped and dimensioned for attachment to a shaft of a golf club.
4. (canceled)
5. (original) The grip according to claim 1, wherein the grip includes a first end and a second end, the first end being closed and the second end being open for attachment to an article.
- 6-13. (canceled)

14. (currently amended) A grip for a golf club, the grip being shaped and dimensioned to fit over a shaft of a golf club, the grip comprising:

a transparent polymeric cylindrical body having an inner surface and an outer surface, the inner surface defining a cavity shaped and dimensioned for receiving an article; and

a design formed within the body and between the inner surface and the outer surface of the body, wherein the design is a result of altering the appearance and material characteristics of the cylindrical body between the inner surface and the outer surface.

15. (original) The grip according to claim 14, wherein the design is three-dimensional.

16. (canceled)

17. (original) The grip according to claim 14, wherein the grip includes a first end and a second end, the first end being closed and the second end being open for attachment to an article.

18. (new) A grip, comprising:

a transparent polymeric body having an inner surface and an outer surface, the inner surface defining a cavity shaped and dimensioned for receiving an article;

a design formed within the body and between the inner surface and the outer surface of the body; and

a light source coupled to the grip for directing light onto the design.

19. (new) The grip according to claim 18, wherein the design is three-dimensional.
20. (new) The grip according to claim 18, wherein the grip is shaped and dimensioned for attachment to a shaft of a golf club.
21. (new) The grip according to claim 18, wherein the grip is substantially cylindrical.
22. (new) The grip according to claim 18, wherein the grip includes a first end and a second end, the first end being closed and the second end being open for attachment to an article.
23. (new) The grip according to claim 18, wherein the light source is an LED.
24. (new) The grip according to claim 23, wherein the light source is positioned within a cap coupled to the body.
25. (new) The grip according to claim 18, wherein the light source is positioned within a cap coupled to the body.
